BOTANICAL BIOMARKERS, BIO-ENZYMES & SCIENTIFIC DEMARCATION REPORT

1. SUB-40 DEG C CRYO-PRESERVED BOTANICAL BIOMARKERS & BIO-ENZYMES

Superoxide Dismutase (SOD) (Intracellular Bio-Enzyme)	Pyrogallol Autoxidation Kinetic Assay (Marklund & Marklund 1974 Protocol)	Enzymatically inactivated > 50 deg C (Thermal pasteurization loss)	**> 12,000 Units / kg (12.45 U / gram)**	Master endogenous antioxidant; neutralizes cytotoxic superoxide free radicals
Total Chlorophyll-a (Natural Porphyrin Pigment)	Double-Beam Spectrophotometry (AOAC Official Method 940.03)	Photodegraded by heat/light (Requires darkroom handling)	**1,150 mg / 100g (1.15% w/w)**	Natural blood alkalizer & cellular oxygenator structurally analogous to human heme
Allophycocyanin (APC) (Accessory Biliprotein)	Spectrophotometric Absorbance @ 650nm (Boussiba & Richmond Protocol)	Preserved in intact phycobilisome (Sub-40 deg C dried)	**3.8% – 4.5% w/w**	Accessory light-harvesting protein supporting cellular detox pathways

2. SCIENTIFIC DEMARCATION: WHY KJELDAHL TESTING DESTROYS DELICATE BIOMARKERS

Analytical Separation Rationale: Standard proximate laboratory testing (such as the IS 7219 protocol used in Lilaba Report #LAL-NN-131125023) measures total elemental nitrogen via destructive Kjeldahl digestion. In this protocol, biomass is boiled in concentrated sulfuric acid (H2SO4) at 420 deg C in the presence of heavy-metal catalysts. This aggressive chemical digestion completely hydrolyzes all peptide bonds into basic ammonium ions to calculate crude protein. However, biologically intact chromoproteins like **C-Phycocyanin** and complex cellular enzymes like **Superoxide Dismutase (SOD)** depend entirely on fragile tertiary and quaternary molecular conformations that permanently denature above 45 deg C to 50 deg C or under extreme pH. Consequently, it is biochemically impossible for standard proximate chemistry assays to measure these living biomarkers. Quantifying active phycocyanin and SOD necessitates dedicated, non-destructive spectrophotometric absorbance assays (Bennett & Bogorad UV-Vis at 620 nm) and kinetic enzymatic assays (Marklund pyrogallol autoxidation). Sujata Nutrilive explicitly maintains this dual-assay architecture to ensure rigorous scientific transparency.
